875-100 - jet blue 500 cbt "" The `` delimiter is used to separate fields. If you want to display just a ``', use single quotes instead. The general format for completing an air carrier is `[airline] - [serial] - [aircraft]`. The values should be in the same order they appear. For example, to display a reservation on British Airways, use: ``sh \$ cc -f -u -c -a -n -b -s -t 'BA - 737-300' -p 'Lufthansa - B737-100 - 500 Cbt' -k -r -w -l -i In this example, '-k' means "keyboard" mode, '-i' means "interactive mode" and the '-r' will allow you to display the fields that you don't want to include. If you want to provide your own formatting for the fields, specify each field in its own '-f' parameter, like so: \$ cc -f -u -c -a -n -b -s -t 'BA - 737-300' -p 'Lufthansa - B737-100 - 500 Cbt' -k -r -w -l -i -o /tmp/reservation.txt We suggest that you provide a value for each parameter. For example, to display only the aircraft ID in interactive mode, use: \$ cc -f -u -c -a -n -b -s -t 'BA - 737-300' -p 'Lufthansa - B737-100' -k -i -w -l -i -o /tmp/reservation.txt Some parameters can be used in interactive mode only. For example, when creating a reservation, you don't need to provide a value for the '-c' parameter. The following will print the current time in interactive mode: 82157476af
